An Introduction to the History of Psychology B.R Hergenhahn and Tracy Henley Year of Publication: 2013 An Introduction to the History of Psychology is a non-traditional textbook co-authored by Hergenhahn and Henley. This contemporary text immediately engaged the reader by presenting the early puzzle that was addressed by Greek philosophers – dreams. Philosophers were stumped for a long period of time as to what dreams were, the purpose they served and how valuable were the contents. From this puzzle came a great number of elaborate theories each attempting to explain human memory and perception. One theory put forth by famous philosopher Descartes explained that the brain was filled with “animal spirits.” The textbook continues on to cover the history of the field of psychology from its creation, to more modern modes of thinking. This seventh edition of the text asserts the majority of interests among modern psychologists are expressions of themes and theories that have been a part of psychology for hundreds, possibly thousands of years. The textbook includes many photographs and academic devices, complete with a plethora of biographical information on the important figures in psychology. Students receive the balance between visual stimulation and narration to expand their understanding of each chapter. This book can be used in unison with the InfoTrac Student Collection. Kalat Year of Publication: 2013 One of the most widely used introductory psychology textbooks is the Introduction to Psychology series, written by James Kalat. In the 13th edition of this series the text moves beyond simply covering the major theories and studies within the field of psychology. This advanced edition encourages students to question the information they are given and ask the important question, “How was this conclusion reached?” and “does the evidence really support it?” This helps students to become amateur scientists. By using this approach, students not only gather the knowledge expected at the introductory level, but they also learn to think critically and become better consumers of research. In this highly student-praised book, the author, a North Carolina State University professor, challenges students previously-held ideas about the field of psychology to allow them to evolve into more informed consumers of information throughout their college experience as well as in post-college life. Kalat uses a humorous writing style and hands-on learning, “Try It Yourself” exercises throughout the book. By combining these teaching strategies, the textbook is able to suit the learning style needs of a wider audience of students. Students using this introductory psychology text can take advantage of the InfoTrac Student Collection.
